DETAILED ACTION

1. This Office Action is the answer to the Amendment filed on August 19, 2009, which paper has been placed of record in the file.
2. Claims **1-27** are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **1, 7, 16, 21, 25, 26, and 27** are allowed over the prior arts cited records.

The closest prior art is:

Trusted Computing Performance Alliance (TCPA) (TCPA Design Philosophies and Concepts, Version 1.0) discloses a computing platform involving a subsystem requires the support of a PKI, although a subsystem does not itself explicitly use that PKI. Page 7, Section 2.4.1.1. TCPA additionally teaches that generally, a CA enables determination of the identity by providing a certificate that binds the identity label of an entity to the cryptographic identity (public key) of that entity. Furthermore, TCPA teaches that any certificate that grants an identity to a subsystem must include the statement 'TCPA subsystem identity' and the signature on the certificate must encompass the statement. Page 7, Section 2.4.1.2. TCPA further teaches that to create a subsystem identity that is recognized by the PKI, the TPM must contain a private endorsement key. Page 9, Section 2.5.1. TCPA further teaches that the owner must make available the endorsement credential, the platform credential, the conformance credential, and the public key of a Privacy CA. Hence, TCPA teaches that a certificate authority provides a certificate that binds the identity label of an entity to the

cryptographic identity (public key) of that entity. Further, TCPA teaches that any certificate that grants an identity to a subsystem must include the statement 'TCPA subsystem identity.' Thus, TCPA does not teach "creating a public/private key pair and a third certificate in response to the receiving step." TCPA instead teaches that the 'Trusted Platform Module Entity' (TPME) is the entity that vouches that a TPM is actually a TPM. Page 8, Section 2.4.1.7. TCPA further teaches that the TPME, and only the TPME, provides the root of the trust in the TPM. TCPA does not teach creating a public/private key pair and a third certificate in response to the receiving step. TCPA does not teach or suggest "sending the public/private key pair and the third certificate to the customer over the network."

Therefore, it is clear from the description of TCPA that the prior arts do not considered the possibility of: receiving from a customer over a network an application for a credit card authorization, a non-migratable key, a first certificate by a Trusted Platform Module (TPM) identity associated with a computer system used by the customer, and a second certificate acquired by the computer system from a Certification Authority (CA), as included in claims 1 and 16; transferring a credit card authorization application, the TPM identity, the non-migratable key, and the first certificate from the customer's computer system to a second server supporting a credit card company, as included on claims 7, 26, and 27; sending to the web site an application for a credit card authorization, the TPM identity, the first certificate, and the non-migratable key; and receiving from the web site a public/private key pair and a second certificate enabling the credit card authorization, as included on claims 21 and 25.

4. Claims (2-6), (8-15), (17-20) and (22-24) are allowed because they are dependent claims of the allowable independent claims 1, 7, 16, and 21 above, in that order.

Conclusion

5. Claims **1-27** are allowed.
